## EXPERIENCE

### Bakerware, Hoogeveen — *Full stack developer*

October 2021 - Current

Develop and maintain applications using Php with Symfony for the backend and Typescript with Vue for the front-end.

Develop a permission system from scratch, including the data structure, UI and creating a Vue plugin which is available globally so you can check anywhere in the application if the user has access rights.

Add a whole set of new features (wishlist) to one of our applications and deploy the changes to a test environment (gitlab CI/CD) so the users can test the new functionality.

Write tests using PHPUnit to get a more robust backend and make refactoring without a lot of regression bugs possible.

Maintain packages with shared functionality with npm version using semver to keep track of the different versions.

## EDUCATION

### Groene Welle, Hardenberg — *Agricultural Studies*

SEPTEMBER 2009- MAY 2012

Technical studies; machinery and production studies.

## CURRENTLY LEARNING

- Express (nodeJs)
- Docker
- Backend communication & protocols
- Refactoring and TDD, a book I use and can really recommend is: Refactoring (Improving the design of existing code)

## SKILLS

Languages:

- PHP
- Typescript/Javascript
- Python
- CSS
- HTML

Frameworks/libraries:

- Symfony
- Vue & Vuetify
- Laravel
- Tailwind

Database:

- Mysql
- Postgres
- Sqlite
- Firebase

Other:

- Git

## LANGUAGES

Dutch- Native

English- Highly proficient

Spanish- Highly proficient

Chinese- Intermediate

German- Basic
